

“Trust and
governance must be
at the core of
enterprise AI.”

Sriram Raghavan
Vice President, IBM Research AI

Effective model governance ensures Granite is developed, deployed, and maintained responsibly and ethically.

Depending on the model, our model governance process may involve:

- model release checklist to ensure internal compliance with policies and best practices
- manual verification of approved datasets and models to train, align, and evaluate models
- ethics review
- internal and external red teaming
- robustness testing and performance benchmarking
- standardized model card
- technical white paper
