

IBM partners with HackerOne on 100k bug bounty for Granite

Data security and model integrity is core to IBM's approach to building and deploying Granite. The IBM Granite team is partnering with HackerOne to stand up a vulnerability disclosure program (i.e., bug bounty program) for IBM Granite – IBM's flagship, opensource foundation models. This partnership will be rolled out in the coming months with a \$100K commitment from IBM in bug bounty payouts for the first year of the partnership. The bug bounty will allow opensource contributors to provide feedback directly to IBM on suspected vulnerabilities, such as successfully adversarial attacks, when running Granite with guardrails at inference.

ISO 42001 compliance certification begins

In 2025, IBM will initiate an ISO 42001 compliance audit, in partnership with Schellman Compliance LLC, under the ISO/IEC 42001:2023 standard for the AI management system of IBM Granite -- IBM's flagship, opensource models. Schellman Compliance, LLC is an ISO certification body accredited by the ANSI National Accreditation Board. ISO/IEC 42001 is an international standard that specifies requirements for establishing, implementing, maintaining, and continually improving AI management systems within organizations. It is designed for entities providing or utilizing AI-based products or services, ensuring responsible development and use of AI systems. IBM's commitment to begin this process in 2025 aligns with our core focus on responsible AI practices.

IBM renews red teaming partnership for Granite in 2025

In 2025, IBM renewed its partnership with Robust Intelligence, now part of Cisco, to deploy Cisco AI Defense as part of our model development lifecycle. The enhanced tool allows the Granite team to automate the red teaming of Granite model checkpoints, screening model performance against a large, diverse set of known adversarial attacks, mapping threats directly to the OWASP TOP 10 LLM list, NIST's Adversarial ML Taxonomy, and the MITRE ATLAS framework. The results of these exercises are maintained on an IBM internal data platform, behind access controls, for a team of technical SMEs to use for AI alignment purposes.

IBM expands red teaming partnerships for Granite in 2025

In Q1 2025, IBM kickstarted a new partnership with HiddenLayer, a recognized leader in securing AI models, to conduct two-week advanced red teaming sprints on select Granite models. The first sprint focused on Granite-vision, using advanced techniques that simulate real-world attack scenarios. The results of each sprint are shared with technical SMEs embedded in the Granite-vision team to further enhance the robustness, resilience, and safety of Granite-vision models.
